AWH Engineering College

Kuttikkattoor

APRIL 2025

DECLARATION

We, the undersigned, hereby declare that the report titled “NSS Connect – Website for AWH Engineering College NSS Unit”, submitted as part of our academic work, is a genuine effort carried out by us with the objective of developing a digital platform to support and highlight the activities of the National Service Scheme (NSS)Unit of AWH Engineering College, Kuttikkattoor. The content of this report is our original work and wherever external sources or references have been used, proper credit has been given. We affirm that we have upheld academic integrity, refrained from plagiarism or data misrepresentation, and complied with all ethical standards. We further declare that this report has not been submitted previously, in part or full, for the award of any degree, diploma, or other academic recognition from any institution.

Place:: Kuttikkattoor

Date: 14/04/2025

AADITH KAILAS K (AWH22CS001)

AJNISH P (AWH22CS008)

NIBIN NIHAD (AWH22CS043)

**DEPT. OF COMPUTER SCIENCE AND ENGINEERING
AWH ENGINEERING COLLEGE, KUTTIKATTOOR**

CERTIFICATE

This is to certify that the report entitled “**NSS Connect – Website for AWH Engineering College NSS Unit**”, submitted by **Aadith Kailas K, Ajnish P, and Nibin Nihad** to the APJ Abdul Kalam Technological University, Kerala, in partial fulfillment of the requirements for the award of the Degree of Bachelor of Technology in Computer Science and Engineering, is a Bonafide record of the project work carried out by them under our guidance and supervision. This report has not been submitted, in any form, to any other University or Institute for any academic purpose.

INTERNAL SUPERVISOR

Dr Kavitha S Murugesan
Head of Dept. CSE

PROJECT CO-ORDINATOR

Ms. Divya M
Assistant Professor Dept. CSE

HEAD OF THE DEPARTMENT

Dr. Kavitha S Murugesan
Associate Professor
Dept. of CSE

ACKNOWLEDGEMENT

We are grateful for the co-operation and constant encouragement from our respected Head of the Department. **Dr. KAVITHA S MURUGESAN**. Her regular suggestions made our work easy and proficient. We would like to express our profound gratitude to our guide **Dr. Kavitha S Murugesan** and project co-coordinator **Ms. Divya M** for their invaluable support, encouragement, supervision and useful suggestions throughout this project work. Their moral support and continuous guidance enabled us to complete our work successfully.

We wish to express our appreciation to all the staff of the CSE department of our college who helped to overcome our doubts in doing this project.

We are heavily indebted to our Principal **Dr. SABEENA M.V** for her constant inspirational assistance throughout the project.

We want to thank our parents for their undivided support and interest who inspired us and encouraged us to go our own way, without whom we would be unable to complete our project. Finally we want to thank our friends who appreciated us for our work and motivated us and finally to a God who made all things possible.

ABSTRACT

The NSS Connect website is an online platform developed to enhance the activities and engagement of the National Service Scheme (NSS) unit at AWH Engineering College, Kuttikkattoor. This website aims to provide a seamless interface for students and faculty to stay informed about NSS events, initiatives, and volunteer opportunities. It serves as a hub for managing and promoting various social service programs, fostering better communication between students, coordinators, and the NSS unit.

By utilizing modern web technologies, NSS Connect enables users to register for events, track volunteer hours, and receive real-time updates on NSS activities. The website also aims to raise awareness about community service and encourage more students to actively participate in NSS programs. Additionally, it acts as a resource center for students, offering easy access to program details, event schedules, and important notices. The development of this website reflects our commitment to building a platform that not only streamlines NSS operations but also motivates students to contribute meaningfully to society. Ultimately, NSS Connect is designed to create a more organized, efficient, and accessible system for NSS activities, contributing to the overall success of the NSS unit at our college.

CHAPTER 1

INTRODUCTION

1.1 GENERAL BACKGROUND

The NSS Connect website is developed as a digital solution to enhance the National Service Scheme (NSS) activities at AWH Engineering College, Kuttikkattoor. The primary aim of the website is to streamline communication, promote social responsibility, and improve participation in NSS events. By centralizing information related to NSS programs, events, and volunteer opportunities, the platform encourages students to get involved and engage in community service. The website provides an easy-to-use interface for both students and coordinators to register, track participation, and access real-time updates on ongoing NSS activities. Ultimately, the NSS Connect website is designed to foster a sense of social responsibility, strengthen the NSS community, and create lasting impacts on the college and surrounding communities.

1.2 OBJECTIVE

The primary objective of NSS Connect is to provide a user-friendly and centralized portal for managing NSS activities. It aims to improve accessibility and communication between volunteers and coordinators. The platform supports event registration, project tracking, report generation, and notifications, ensuring that volunteers stay informed and active. It also aims to encourage higher participation in community service by making NSS processes more transparent and manageable. Ultimately, the project seeks to enhance the overall impact of NSS initiatives through efficient coordination and real-time updates.

1.3 SCOPE OF THE PROJECT

The scope of NSS Connect includes features such as volunteer registration, event creation and management, attendance tracking, certificate generation, feedback collection, and a gallery for activity documentation. The platform supports both web and mobile accessibility, enabling users to stay connected from anywhere. By addressing current manual challenges

like communication delays and data management inefficiencies, NSS Connect ensures better documentation, increased volunteer participation, and improved collaboration across teams. It is designed to scale with future requirements, potentially integrating with university databases or expanding to support inter-college NSS collaborations.

CHAPTER 2

LITERATURE SURVEY

2.1 IMPLEMENTATION OF DIGITAL PLATFORMS FOR VOLUNTEER MANAGEMENT (by Sharma & Patel, 2022)

This study evaluates how digital platforms influence the performance and engagement of volunteers in community service initiatives.

2.1.1 Methodology

A survey was conducted with 200 student volunteers using online NSS management platforms. Volunteer activity data and engagement levels were analyzed over six months.

2.1.2 Advantages

- Improved accessibility to information and tasks
- Better scheduling and coordination of events
- Activity tracking for volunteers

2.1.3 Disadvantages

- Limited real-time supervision
- Occasional technical glitches
- Reduced face-to-face interaction

2.2 TECHNOLOGY-ENABLED VOLUNTEERING IN EDUCATIONAL INSTITUTIONS (by Cebolla et al., 2020)

This review explored how digital tools help in organizing large-scale student volunteering activities and enhancing their effectiveness. To examine the efficacy of personal health coaching systems for older adults using digital virtual agents.

2.2.1 Methodology

A systematic literature review was conducted in December 2019, analyzing ten years of research data across multiple databases. Nine relevant studies were examined in depth.

2.2.2 Advantages

- Digital systems improve efficiency in task allocation and communication.
- Enhance tracking of volunteer hours and event participation.
- Allow for real-time updates and notifications.

2.2.3 Disadvantages

- Technology familiarity may affect adoption rates among users.
- Systems may lack flexibility for spontaneous or rural outreach events.

2.3 IMPLEMENTATION OF A COLLEGE-BASED VOLUNTEER MANAGEMENT SYSTEM (by Moore & Williamson, 2023)

This case study investigates the digital transformation of volunteer management in a college setting, focusing on transitioning from manual to digital systems.

2.3.1 Methodology

A detailed case study was conducted on one college's shift from manual documentation to a centralized digital system for managing NSS activities, tracking one semester of implementation.

2.3.2 Advantages

- Cost-effective and reduces administrative overhead
- Provides easy access to event data and certificates
- Essential during times when physical interaction is limited (e.g., lockdowns)

2.3.3 Disadvantages

- Challenges in maintaining digital literacy among all users
- Miscommunication due to lack of physical supervision
- Requires consistent internet connectivity

2.4 COMPARISON OF RELATED WORKS

REF NO.	Methodology Used	Advantages	Disadvantages
1	Survey based analysis of volunteer patterns	• Improved accessilbilty • Better coordination	• Technical glitches Reduced • face-to-face interaction
2	Systematic review of educational volunteering systems - Efficiency in communication	• Real-time tracking • Volunteer hour management	• Less adaptable for rural task • Tech familiarity barriers
3	Case study of college volunteer system transition	• Cost-effective • Ideal for remote work scenarios • Easy access to records	• Communication gaps • Internet is required

Table 2.1 comparison of related works

CHAPTER 3

SYSTEM ANALYSIS

3.1 EXISTING SYSTEM

Currently, many colleges and institutions manage NSS activities through offline or fragmented digital processes like WhatsApp groups, manual attendance, or basic notice boards. These systems are often inefficient, lack transparency, and make it difficult to track volunteer participation, event scheduling, and documentation. Volunteers may miss important updates, and program officers struggle with maintaining records, certificates, and communication. Additionally, there is no centralized platform for collaboration, feedback collection, or accessing NSS-related resources. As a result, coordination becomes time-consuming and ineffective.

3.2 PROBLEM STATEMENT

Despite the wide reach of the NSS and its crucial role in student development and social service, most NSS units lack a unified digital platform to manage their operations effectively. Volunteers often miss activities or announcements due to decentralized communication, and tracking contributions or issuing participation certificates becomes cumbersome. There is also limited interaction between NSS units across institutions, which hampers idea sharing and collaboration. These issues call for a smart, centralized system to streamline the management of NSS activities and enhance communication, engagement, and transparency.

3.3 PROPOSED SYSTEM

NSS Connect is a centralized digital platform designed to manage, monitor, and enhance the efficiency of NSS operations within educational institutions. It aims to digitize key aspects of NSS functioning such as event scheduling, attendance tracking, volunteer profiles,

certificate generation, and activity reports. The system offers an admin panel for coordinators to post updates and manage events, while volunteers get personalized dashboards to register, check attendance, view announcements, and access certificates. Features like real-time notifications, digital documentation, feedback forms, and inter-college collaboration aim to simplify operations and increase participation. By offering a seamless, user-friendly, and transparent system, NSS Connect will foster stronger engagement and better impact in the field of social service.

CHAPTER 4

FEASIBILITY STUDY

4.1 TECHNICAL FEASIBILITY

NSS Connect is technically feasible due to the widespread availability of modern web development technologies such as HTML, CSS, JavaScript, and backend frameworks like Django or Node.js. It can be built using scalable cloud infrastructure, ensuring smooth performance even during high user traffic, such as event registrations or bulk certificate generation. The system can also integrate with APIs for email notifications, attendance tracking, and Google Forms for surveys or feedback, making the platform robust and expandable.

4.2 OPERATIONAL FEASIBILITY

NSS Connect is operationally feasible because it aligns well with the day-to-day activities of NSS units. The platform streamlines key operations such as event management, attendance tracking, communication, and documentation. Volunteers and coordinators will find the system easy to use with minimal training, as it is designed to be intuitive and mobile-friendly. The centralized system improves coordination, saves time, and reduces paperwork, making it a practical tool for colleges and universities.

4.3 ECONOMICAL FEASIBILITY

NSS Connect is economically feasible as it requires minimal initial investment and offers long-term cost savings. Since it's a web-based platform, hosting and maintenance costs are relatively low. The solution eliminates the need for physical registers, printed certificates, and manual tracking, thus reducing administrative expenses. Furthermore, open-source tools and platforms can be used to minimize software development costs, making it accessible even for institutions with limited budgets.

CHAPTER 5

REQUIREMENT SPECIFICATIONS

5.1 FUNCTIONAL REQUIREMENTS

- Volunteers and coordinators can register and log in using secure credentials.
- Event Management: Admin can add, edit, or delete upcoming NSS event details including date, venue, and description. Users can view upcoming and past events.
- Gallery Upload: Admin can upload event photographs to the website gallery. Users can browse through event-wise categorized photos.
- Notice Board: Admin can publish important notices or announcements on the homepage.
- Users can view the latest updates and download attachments if needed.
- Registration Forms: Admin can link Google Forms or similar registration forms for upcoming events or campaigns. Users can access and fill out forms directly through the website.
- Feedback System: Users can provide feedback about the events or website experience. Admin can review and analyze the feedback.
- Logout: Secure logout option for admin and other authorized users to end sessions safely.

5.2 NONFUNCTIONAL REQUIREMENTS

- Security: The system ensures secure login and protection of event data and user credentials.
- Accuracy: The website displays accurate event details, notice board information, and registration links.
- Performance: The system is optimized for fast loading, smooth browsing, and quick access to forms and media.
- Maintainability: The system allows easy updates and modifications to event data, gallery, and notices.

- User Friendliness: The website provides a clean, intuitive interface accessible to students, staff, and guests.

5.3 USE CASE DIAGRAM

- The Use Case diagram of the NSS Connect system consists mainly of two user roles: Admin and Volunteer/Guest. Their interaction with the system is shown below.
- Actors :Admin – Responsible for managing events, notices, gallery uploads, and registration links.
- Volunteer/Guest – Can view events, access notices, register for events, browse gallery images, and provide feedback. Use Cases for Volunteer/Guest:
 - Register/Login View Events Access Notices
 - Submit Event Registration View Gallery
 - Give Feedback
- Use Cases for Admin: Add/Edit/Delete Events Upload Gallery Images Post Notices
- Link Google Forms View Feedback
- Manage Users (optional)

CHAPTER 6

SYSTEM DESIGN

6.1 SOFTWARE ARCHITECTURE

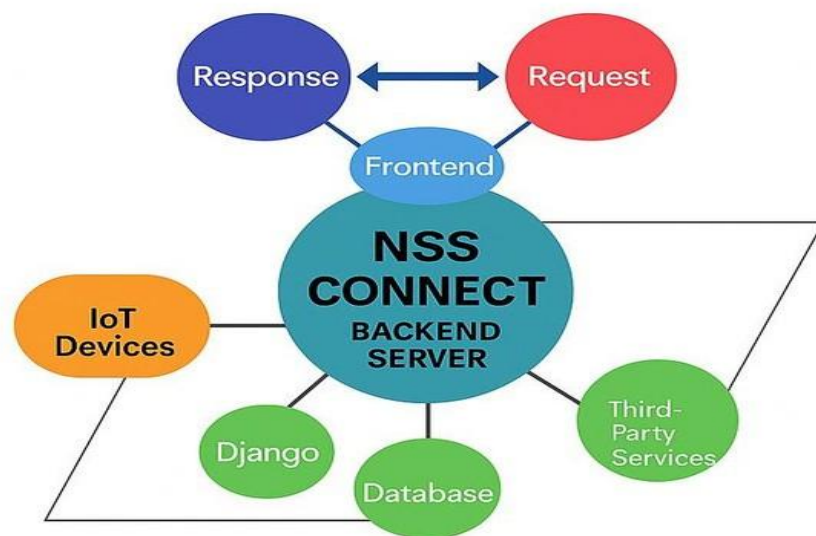

Fig 6.1 Software Architecture

6.2 WORKING PRINCIPLE

The NSS Connect platform works by providing a centralized digital space that simplifies the management and coordination of National Service Scheme (NSS) activities. It allows volunteers to easily register for events, view announcements, and stay updated on upcoming programs. Coordinators can efficiently handle event registrations, share important notices, and maintain accurate records of participation. By streamlining these tasks into a user-friendly system, NSS Connect enhances communication, encourages active volunteer involvement, and ensures smooth execution and documentation of all NSS-related initiatives.

6.3 INPUT DESCRIPTION

- **Login Credentials**

Admin and coordinators are provided with usernames and passwords to access the system securely.

- **Dashboard**

The home page for the admin or coordinator, showing quick access to key features such as event management and user data.

- **Event and Notice Upload**

Admins can add new events, upload notices, and manage details through dedicated input sections.

- **Volunteer Registration**

Users can register as volunteers through an integrated online form. The form collects necessary personal and academic details.

- **Search**

Admins and coordinators can search for registered volunteers or past event records for quick access and management.

- **Feedback**

Volunteers can provide feedback about events, which is stored in the system and can be reviewed by coordinators. Admins and coordinators can search for registered volunteers or past event records for quick access and manage

6.4 OUTPUT DESCRIPTION

- **NSS Connect Web Portal**

The NSS Connect portal can be accessed by volunteers, coordinators, and admins for updates and information.

- **Event Listings**

Volunteers can view upcoming events and their details on the website. Registration Confirmation. Once a user registers for an event, a confirmation message or email is generated as output.

- **Volunteer Records**

Admins can view, update, and download volunteer registration and participation records.

- **Notice Board**

All uploaded notices are displayed publicly on the portal for students and staff to view.

- **Feedback Display**

Feedback submitted by volunteers can be reviewed and used by the admin or coordinator for future improvements

6.5 DATABASE DESIGN

The users of the system Admin along with the other main components are considered as different tables. This system uses 5 database tables as follows.

FIELD NAME	DATA TYPE	SIZE	DESCRIPTION
ID	INT	100	Primary Key
Name	CHAR	100	Not Null
Email	CHAR	100	Email ID Of User
Password	CHAR	225	Password For Login
Role	CHAR	200	Volunteer/Coordinator
Location	CHAR	100	User's Location/Address

Table 6.5.1 USER

FIELD NAME	DATA TYPE	SIZE	DESCRIPTION
ID	INT	100	Profile id
Name	CHAR	100	Name of the customer
Sport	CHAR	50	Name of the customer
Skill Level	CHAR	100	Sport in which the user is involved
Bio	CHAR	200	Sport in which the user is involved
Availability	CHAR	-	A brief description or introduction

Table 6.5.2 PROFILE

FIELD NAME	DATA TYPE	SIZE	CONSTRAINTS
ID	INT	100	PRIMARY KEY
user	INT	100	FOREIGN KEY
Date and time	NOT NULL		SCHEDULED DATE AND TIME
status	NOT NULL		CURRENT STATUS OF SESSION

Table 6.5.3 SESSIONS

CHAPTER 7

IMPLEMENTATION & TESTING

7.1 MINIMUM HARDWARE REQUIREMENT

- Stable internet connection. RAM: Minimum 2 GB.
- Storage: At least 500 MB available.

7.2 MINIMUM SOFTWARE REQUIREMENT

- Front-end: HTML, CSS
- Back-end: Python Django
- Operating Systems: Windows, iOS, Android
- Access: Any modern web browser.

7.3 TYPES OF TESTING CONDUCTED

- **Unit Testing**

All basic units of code, including loops, condition statements, and functions, were tested to ensure proper functionality.

- **Performance Testing**

The performance of the NSS Connect application was tested by evaluating its loading time, database response times, and overall speed. The results were satisfactory, ensuring smooth operation and quick response times.

- **Regression Testing**

When new modules were integrated into the application, regression testing was conducted to ensure that the new changes did not interfere with existing features, and everything continued to work as expected.

7.4 TEST CASES – NSS CONNECT

Login:

- Description: Validates the login functionality for admin and registered NSS volunteers. Input: Valid credentials (username and password).
- Expected Result: Successful login and redirection to the respective user dashboard. Test Result: Successfully completed. Login and redirection are functional.

Register Volunteer:

- Description: Tests the registration process for new NSS volunteers. Input: Name, Email, Password, Department, Semester, Contact Number.
- Expected Result: Volunteer is successfully registered, and details are stored in the database. Test Result: Successfully completed. Volunteer registration is functional.

Add Event

- Description: Tests the functionality for the admin to add upcoming NSS events. Input: Event Title, Description, Date, Venue, and Poster/Image (optional).
- Expected Result: Event is successfully added and visible to users on the events page. Test Result: Successfully completed. Event addition is functional.

View Event Gallery

- Description: Validates access to the gallery showcasing past NSS activities. Input: User clicks on "Gallery" section.
- Expected Result: Displays images and descriptions of past events. Test Result: Successfully completed. Event gallery is functional.

Submit Feedback

- Description: Allows volunteers to submit feedback after participating in events. Input: Event ID, Volunteer Name, Rating, and Comments.
- Expected Result: Feedback is stored and linked to the respective event. Test Result: Successfully completed. Feedback submission is functional.

Post Notice

- Description: Tests the admin's ability to post important notices for NSS volunteers.
Input: Notice Title, Description, and Date.
- Expected Result: Notice is published and viewable in the "Notices" section. Test Result: Successfully completed. Notice board functionality is working.

Download Report

- Description: Checks the download functionality for event reports or volunteer records.
Input: Admin selects a report type and clicks "Download".
- Expected Result: File is generated and downloaded successfully.
- Test Result: Successfully completed. Report download feature is functional.

Logout

- Description: Validates secure logout functionality for all users. Input: Click on "Logout" button.
- Expected Result: Session ends, and user is redirected to the login page. Test Result: Successfully completed. Logout works as intended.

8.2 ANALYSIS OF THE RESULTS

The NSS Connect platform for AWH Engineering College, Kuttikattoor, offers key functionalities for admin and staff users to manage NSS activities efficiently. The main modules tested and analyzed are detailed below:

- **Login :** The login functionality was tested using valid credentials for admin and staff roles. The expected behavior were successful authentication and redirection to the appropriate dashboard. The test result was successful, confirming that the login system and redirection processes are working correctly.

- **Add Upcoming Events** During testing, new upcoming event details such as event name, date, location, and description were entered by the admin. The expected outcome was the storage of event details in the database and proper display on the website. The test result was successful, and the module functioned as expected.
- **View Conducted Events** : This module displays information about past events organized by the NSS unit. Testing involved checking whether previously added events appear correctly in the "Conducted Events" section. The expected result was accurate listing of past events along with their details. The module was found to be fully functional.
- **Image Uploads** Admins and staff can upload images related to NSS events. This feature was tested by uploading event-related photos to both upcoming and conducted event sections. The expected result was proper saving and display of images in the gallery or respective event sections. The image upload and display functionality worked successfully during testing.

CHAPTER 9

CONCLUSION

9.1 SUMMARY

NSS Connect is a digital platform created to streamline and enhance the operations of the National Service Scheme. The system is designed to facilitate better communication, registration, event updates, and interaction between NSS volunteers, coordinators, and administrators. The platform allows volunteers to register easily, view notices and upcoming events, and access event photographs and updates—all through a user-friendly interface. It brings together all essential components of the NSS under one digital roof, reducing manual processes and improving engagement.

Key features include:

- Centralized volunteer registration system
- Event management and photograph gallery
- Notice board for updates and announcements
- Admin dashboard for managing users and content

The system is built using:

- Frontend: HTML, CSS
- Backend: Python Django
- Database: (Based on Django – typically SQLite/PostgreSQL)

All functional and non-functional requirements were successfully implemented. The platform has been tested thoroughly for performance, reliability, and ease of use, making NSS Connect an effective and scalable digital solution for NSS units.

9.2 FUTURE ENHANCEMENT

- Integration of a notification system (email/SMS alerts for events and notices)
- Support for volunteer performance tracking and certificate generation

- Real-time chat or forum for better collaboration among volunteers
- Mobile app version for on-the-go access
- Integration with cloud storage for seamless media and data management
- Option to generate event participation reports and analytics
